Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A device for monitoring an output power of a radio, the device comprising:

at least one radio-frequency module for converting baseband transmission signals having signal amplitudes to radio-frequency signals and for amplifying said radio-frequency signals, said radio-frequency module including a power amplifier having a controllable gain;

a scaling unit for varying said signal amplitudes of said baseband transmission signals, said scaling unit including a memory for storing a sequence of rising or falling amplitude values;

said sequence of amplitude values producing a rising or falling profile for said signal amplitudes of said baseband transmission signals;

a controller for controlling said scaling unit and for synchronizing said varying of said signal amplitudes of said baseband transmission signals by said scaling unit with a
